

PILLARS OF EXCELLENCE

Infant Cognition and Ability

Copyright 2020

Have you ever looked at the infants you care for, and wished you knew what they were thinking?

Science has given us a new perspective on how their brains work and what our youngest population may be thinking. On how infants communicate and how they are learning about the new environment they have entered into.

This course is going to present what the research says, and explore the ways in which children learn about you and everything around them.

Learning Outcomes

- You will discover the cognitive development of infants and report through assignments, discussion board, check your knowledge, and reflections.
- You will have an opportunity to discuss and reflect on the information considering your previous understanding of infant cognition.
-

Knowledge Areas

- 2 Annual Training Hours
- Human Growth & Development Set 1
- Child Growth & Development Level 2

Course Overview

Cognitive Insights

How babies engage the world

Milestones

Developmental Stages of thought

Learning

How do babies learn

Language

Which comes first? Language or thought?

Thinking

How do babies process input?

Serve and Return

The importance of the caregiver in brain development.
